WINTER INTERNSHIP

COMPLETE STUDENT COURSE OUTLINE

13 Specialization Tracks | 10 Days per Track | 30 Hours per Track

TECHNICAL TRACKS

- Web Development & Full Stack Development
- App Development
- Python Programming
- Artificial Intelligence & Machine Learning
- Data Science & Analytics
- UI/UX Design
- IoT & Embedded Systems

NON-TECHNICAL TRACKS

- Human Resource Management
- Marketing
- Finance & Accounting
- Digital Marketing
- Business Development
- Sales

Beginner-friendly daily lessons with simple hands-on activities and a practical project for every day.

PLANT GREEN INERTIA

TECHNICAL TRACK

Web Development & Full Stack Development

10-Day Course Outline | 30 Hours

Course overview: Learn how websites are structured, styled, made interactive, tested, and published online. Build a simple website using HTML, CSS, and JavaScript, then learn the basics of full-stack development.

Day 1 — Introduction to Web Development & HTML

Understand how websites work and learn the basic structure of an HTML page. Practise headings, paragraphs, links, images, and buttons.

Project / application: Create a simple personal profile webpage.

Day 2 — HTML Elements & Forms

Learn lists, tables, input fields, labels, dropdowns, and form elements. Organize content using header, navigation, main, and footer sections.

Project / application: Create a student registration form.

Day 3 — CSS Fundamentals

Learn how CSS changes a webpage's appearance using colours, fonts, backgrounds, borders, margins, and padding.

Project / application: Style the student registration page.

Day 4 — Website Layout & Responsive Design

Practise arranging content with Flexbox, cards, navigation bars, and sections. Make a page fit mobile, tablet, and desktop screens.

Project / application: Make the webpage responsive.

Day 5 — JavaScript Basics

Learn variables, data types, operators, conditions, and functions. Use JavaScript to respond to button clicks and user input.

Project / application: Create a simple calculator or marks calculator.

Day 6 — JavaScript DOM & Form Validation

Learn to select and update webpage elements. Check required fields and show simple success or error messages.

Project / application: Add validation to the registration form.

Day 7 — Introduction to Backend & APIs

Understand what a server and database do. Learn the basic idea of sending form data to a backend and receiving information from an API.

Project / application: Create a simple page that displays sample data from an API.

Day 8 — Building a Complete Website

Combine Home, About, Services or Projects, and Contact sections. Add navigation and keep the design consistent.

Project / application: Build a personal portfolio or business landing page.

Day 9 — GitHub & Website Testing

Test the website on different screen sizes, fix common errors, and learn how to upload project files to a GitHub repository.

Project / application: Test the website and upload the project to GitHub.

Day 10 — Website Publishing & Final Project

Publish a static website using GitHub Pages. Check links, images, and layout, then explain the completed project.

Project / application: Publish and present a responsive portfolio or business website.

Tools covered: Visual Studio Code, Google Chrome, HTML, CSS, JavaScript, GitHub, GitHub Pages

PLANT GREEN INERTIA PRIVATE LIMITED
THE WORLD'S FIRST EXPERIENTIAL TRAINING COMPANY

NO.4, 1ST FLOOR, ALAPAKKAM MAIN ROAD,
MADURAVOYAL, CHENNAI - 600095

TECHNICAL TRACK

App Development

10-Day Course Outline | 30 Hours

Course overview: Learn mobile app design, user interactions, app logic, data storage, testing, and basic Android-style app building using MIT App Inventor.

Day 1 — Introduction to Mobile App Development

Understand what mobile apps are and the difference between mobile apps and websites. Explore MIT App Inventor's Designer and Blocks workspaces.

Project / application: Create a simple welcome screen.

Day 2 — App Screen Design & Components

Add and arrange labels, buttons, text boxes, images, lists, and layouts. Change colours, fonts, alignment, and screen settings.

Project / application: Design a profile or contact information screen.

Day 3 — Events & User Interaction

Connect buttons to actions, read text entered by users, update screen content, and display messages.

Project / application: Create a greeting app that uses the user's name.

Day 4 — Variables, Conditions & Calculations

Use variables, simple conditions, and maths blocks. Take input from users and display a calculated result.

Project / application: Build a calculator or marks/grade calculator.

Day 5 — Multiple Screens & Navigation

Create more than one screen and move between screens. Practise simple Home and Back navigation.

Project / application: Create a multi-screen quiz app.

Day 6 — Lists & Repeated Data

Create and display lists of tasks, questions, or expenses. Learn to add and remove list items using blocks.

Project / application: Build a basic to-do list app.

Day 7 — Local Data Storage

Understand why apps save information. Use TinyDB to save and retrieve simple values after an app is closed.

Project / application: Create a notes app with saved entries.

Day 8 — Phone Features & User Experience

Try a supported phone feature such as sound, camera, or sharing. Add input checks, confirmation messages, and simple error handling.

Project / application: Add one suitable phone feature to the app.

Day 9 — Final App Project Development

Plan the app's screens and user flow. Combine interface components, app logic, and saved data, then test the main features.

Project / application: Build an attendance tracker, quiz app, task manager, or expense tracker.

Day 10 — App Testing & Project Presentation

Test screens and buttons, fix common issues, improve the interface, and prepare a short project demonstration. Build an APK if supported.

Project / application: Present a working beginner-level mobile app.

Tools covered: MIT App Inventor, browser, Android phone or emulator, TinyDB

PLANT GREEN INERTIA PRIVATE LIMITED
THE WORLD'S FIRST EXPERIENTIAL TRAINING COMPANY

TECHNICAL TRACK

Python Programming

10-Day Course Outline | 30 Hours

Course overview: Learn the basics of Python through short coding exercises. Practise using input, conditions, loops, functions, files, and simple automation.

Day 1 — Introduction to Python

Understand what Python is used for. Set up a beginner coding environment and run your first program.

Project / application: Write a program that displays a personal introduction.

Day 2 — Variables & Data Types

Learn variables, numbers, text, Boolean values, and how to receive input from a user.

Project / application: Create a simple personal details program.

Day 3 — Operators & Conditions

Practise arithmetic and comparison operators. Use if, elif, and else to make decisions in a program.

Project / application: Create an age checker or simple grade calculator.

Day 4 — Loops

Learn for and while loops to repeat tasks. Use simple examples to understand counters and repeated actions.

Project / application: Create a multiplication table generator.

Day 5 — Strings & Lists

Work with text and lists. Practise accessing, adding, removing, and updating items.

Project / application: Create a shopping list program.

Day 6 — Dictionaries & Functions

Store information using dictionaries and organize reusable code using functions.

Project / application: Create a student record program.

Day 7 — Working with Files

Learn to open, read, and write simple text files. Understand how programs can save information.

Project / application: Create a notes app that saves text to a file.

Day 8 — Error Handling & Modules

Learn basic try/except error handling and how to use built-in Python modules.

Project / application: Create a safe calculator that handles invalid input.

Day 9 — Mini Project Development

Plan a small project, break it into simple steps, and combine the Python topics learned so far.

Project / application: Build an expense tracker or quiz program.

Day 10 — Testing & Project Presentation

Test the program with different inputs, correct common errors, and explain how the project works.

Project / application: Present the completed Python mini project.

Tools covered: Python 3, IDLE or Visual Studio Code, terminal, basic Python modules

TECHNICAL TRACK

Artificial Intelligence & Machine Learning

10-Day Course Outline | 30 Hours

Course overview: Understand everyday uses of AI and learn beginner-level machine learning concepts. Explore simple datasets, model training, and responsible use of AI tools.

Day 1 — Introduction to AI

Understand artificial intelligence through familiar examples such as voice assistants, recommendations, and chatbots.

Project / application: List and explain five everyday uses of AI.

Day 2 — AI Tools & Prompt Writing

Explore beginner-friendly AI tools. Practise writing clear prompts and checking whether the answers are useful.

Project / application: Create a useful prompt set for study or office tasks.

Day 3 — Introduction to Machine Learning

Understand how machine learning uses examples and data to identify patterns. Learn the difference between AI and ML.

Project / application: Sort real-life examples into AI and non-AI uses.

Day 4 — Data & Features

Learn what a dataset, row, column, and feature mean. Identify useful information in a small sample dataset.

Project / application: Prepare a simple student marks or house-price dataset.

Day 5 — Types of Machine Learning

Understand supervised and unsupervised learning through easy examples such as prediction and grouping.

Project / application: Match simple problems to the correct learning type.

Day 6 — Preparing Data

Learn why data must be checked and cleaned. Practise finding missing values, repeated rows, and incorrect entries.

Project / application: Clean a small sample dataset.

Day 7 — First ML Model

Use a beginner-friendly notebook or visual tool to train a simple prediction model with prepared data.

Project / application: Train a basic model using a sample dataset.

Day 8 — Checking Model Results

Understand predictions, accuracy, and why a model can make mistakes. Test the model with new examples.

Project / application: Record and discuss sample model predictions.

Day 9 — AI Mini Project

Choose a simple problem and combine a dataset, an AI/ML tool, and a clear result.

Project / application: Create a simple prediction or classification demonstration.

Day 10 — Review & Responsible AI

Present the mini project. Discuss privacy, fairness, checking AI outputs, and the limits of AI systems.

Project / application: Demonstrate the project and explain its result and limitations.

Tools covered: Beginner-friendly AI tools, Google Colab or Jupyter Notebook, sample datasets, spreadsheet software

TECHNICAL TRACK

Data Science & Analytics

10-Day Course Outline | 30 Hours

Course overview: Learn how to collect, organize, clean, understand, and present data. Use simple spreadsheet exercises and beginner Python tools to create charts and reports.

Day 1 — Introduction to Data & Data Science

Understand what data is and how businesses use it to make decisions. Learn the difference between rows, columns, and records.

Project / application: Identify useful information in a sample sales dataset.

Day 2 — Spreadsheets for Data

Enter data, format cells, sort records, and use simple formulas in a spreadsheet.

Project / application: Create a student marks or daily expense sheet.

Day 3 — Data Cleaning

Find blank cells, duplicate records, spelling differences, and incorrect values. Practise correcting a small dataset.

Project / application: Clean a sample customer or sales dataset.

Day 4 — Basic Data Analysis

Calculate totals, averages, minimums, and maximums. Learn how simple summaries help explain data.

Project / application: Prepare a summary of monthly sales or student marks.

Day 5 — Introduction to Python for Data

Understand how Python can help work with data. Open a notebook and run simple commands.

Project / application: Load and view a small sample dataset.

Day 6 — NumPy & Pandas Basics

Explore simple arrays and tables. Practise viewing columns, selecting rows, and calculating basic values.

Project / application: Create a small data summary using Pandas.

Day 7 — Charts & Data Visualization

Choose suitable bar, line, and pie charts. Learn how titles and labels make charts easier to understand.

Project / application: Create three charts from a sample dataset.

Day 8 — Introduction to Power BI

Explore the Power BI interface. Import a spreadsheet and create simple visuals.

Project / application: Build a basic sales dashboard.

Day 9 — Dashboard Development

Arrange charts, summary cards, and filters. Practise presenting information clearly.

Project / application: Create an interactive dashboard for a sample business.

Day 10 — Final Report & Presentation

Check the data, explain the main findings, and present the dashboard in simple language.

Project / application: Present a data analysis report and dashboard.

Tools covered: Microsoft Excel or Google Sheets, Python, Google Colab or Jupyter Notebook, Pandas, Power BI

TECHNICAL TRACK

UI/UX Design

10-Day Course Outline | 30 Hours

Course overview: Learn how to plan and design easy-to-use website and mobile app screens. Practise layouts, colours, typography, wireframes, and clickable prototypes.

Day 1 — Introduction to UI & UX

Understand the difference between user interface and user experience. Review examples of easy-to-use apps and websites.

Project / application: Identify good and confusing design elements in an app.

Day 2 — Design Principles

Learn about alignment, spacing, contrast, colours, and visual hierarchy.

Project / application: Create a simple design mood board.

Day 3 — Understanding Users

Learn how to identify users, their needs, and the problems a design should solve.

Project / application: Write a simple user profile and list user needs.

Day 4 — User Flow & Wireframes

Plan the steps a user follows in an app. Draw basic screen layouts using boxes and labels.

Project / application: Create a wireframe for a login and home screen.

Day 5 — Introduction to Figma

Explore the Figma workspace. Create frames, add shapes, and arrange basic design elements.

Project / application: Design a simple mobile app screen.

Day 6 — Typography, Colours & Components

Choose readable fonts and matching colours. Create reusable buttons, fields, and other components.

Project / application: Create a small style guide and component set.

Day 7 — Designing Multiple Screens

Use the same style across screens. Practise designing navigation, forms, cards, and content sections.

Project / application: Design three connected app screens.

Day 8 — Prototyping & Interaction

Connect screens and add clickable buttons to show how the app works.

Project / application: Create a clickable prototype.

Day 9 — Feedback & Design Improvements

Ask someone to try the prototype. Note confusing areas and improve the layout and navigation.

Project / application: Improve the prototype using feedback.

Day 10 — Final Design Presentation

Organize the final screens, explain the design choices, and demonstrate the prototype.

Project / application: Present a website or mobile app design prototype.

Tools covered: Figma, browser, paper and pencil for early wireframes

TECHNICAL TRACK

IoT & Embedded Systems

10-Day Course Outline | 30 Hours

Course overview: Understand how sensors and small electronic boards work together to collect information and control devices. Build simple beginner projects using a microcontroller.

Day 1 — Introduction to IoT

Understand the Internet of Things through examples such as smart lights and temperature monitoring. Learn the basic parts of an IoT system.

Project / application: Draw a simple smart-home IoT system.

Day 2 — Basic Electronics & Components

Identify common components such as LEDs, resistors, switches, sensors, and breadboards. Learn basic electrical safety.

Project / application: Identify components and make a simple LED circuit.

Day 3 — Introduction to Microcontrollers

Understand what a microcontroller does. Explore an Arduino or ESP32 board and identify its main pins.

Project / application: Set up the board and run a basic LED blink example.

Day 4 — Basic Programming for Boards

Learn simple code structure, variables, and digital input/output using beginner examples.

Project / application: Control an LED using a simple program.

Day 5 — Working with Sensors

Understand how sensors measure things such as light, distance, and temperature. Read simple sensor values.

Project / application: Read and display a sensor value.

Day 6 — Working with Outputs

Learn how boards control LEDs, buzzers, and other simple output devices.

Project / application: Build a sensor-based LED or buzzer alert.

Day 7 — Connecting to Wi-Fi

Understand how an ESP32 connects to a Wi-Fi network. Learn the basic idea of sending sensor data online.

Project / application: Demonstrate a basic Wi-Fi connection.

Day 8 — IoT Data Monitoring

View sensor readings on a simple serial monitor or beginner dashboard. Understand how data can be checked over time.

Project / application: Create a simple temperature or light monitoring demo.

Day 9 — Mini Project Development

Combine a board, sensor, and output device to solve a small practical problem.

Project / application: Build a basic smart-light or environment-monitoring prototype.

Day 10 — Testing & Project Presentation

Check wiring and readings, correct simple issues, and explain how the device works.

Project / application: Demonstrate the completed IoT prototype.

Tools covered: Arduino IDE, Arduino or ESP32 board, breadboard, LEDs, resistors, basic sensors, USB cable

NON-TECHNICAL TRACK

Human Resource Management

10-Day Course Outline | 30 Hours

Course overview: Understand the basic work of an HR team, from finding candidates and arranging interviews to onboarding employees and maintaining records.

Day 1 — Introduction to Human Resources

Understand the role of HR in an organization and learn common HR responsibilities.

Project / application: Prepare a simple chart showing the main duties of an HR team.

Day 2 — Workplace Communication

Practise polite email writing, phone communication, and professional conversations.

Project / application: Write a simple interview invitation email.

Day 3 — Job Descriptions & Hiring

Learn what a job description contains and how companies announce vacancies.

Project / application: Prepare a job description for an entry-level role.

Day 4 — Resume Screening

Learn how to read resumes and compare candidate details with job requirements.

Project / application: Review sample resumes and prepare a shortlist.

Day 5 — Interview Coordination

Understand how to schedule interviews, contact candidates, and maintain interview records.

Project / application: Prepare a sample interview schedule.

Day 6 — Employee Onboarding

Learn the steps involved when a new employee joins, including forms, orientation, and basic introductions.

Project / application: Create a new-employee onboarding checklist.

Day 7 — Attendance & Leave Records

Understand how attendance and leave details are recorded and organized.

Project / application: Prepare a simple attendance tracker in a spreadsheet.

Day 8 — Employee Engagement

Learn simple ways to welcome employees, collect feedback, and support teamwork.

Project / application: Prepare a short employee feedback form.

Day 9 — HR Documentation

Understand basic HR records such as employee details, joining forms, and training records. Handle information carefully.

Project / application: Create a sample employee information tracker.

Day 10 — HR Mini Project & Review

Combine recruitment, interview coordination, and onboarding activities into a simple HR workflow.

Project / application: Present a sample recruitment-to-onboarding process.

Tools covered: Microsoft Excel or Google Sheets, Word or Google Docs, email, sample HR forms

Marketing

10-Day Course Outline | 30 Hours

Course overview: Learn how businesses understand customers, study competitors, plan marketing activities, and communicate the value of a product or service.

Day 1 — Introduction to Marketing

Understand what marketing means and how products or services reach customers.

Project / application: Choose a familiar product and explain how it is marketed.

Day 2 — Products & Customers

Learn about customer needs, product features, and the value a product offers.

Project / application: Prepare a simple product and customer profile.

Day 3 — Market Research

Understand how to collect basic information through observation, simple surveys, and online research.

Project / application: Create a short customer survey.

Day 4 — Customer Segmentation

Learn how customers can be grouped by needs, interests, age range, or location.

Project / application: Group sample customers into simple segments.

Day 5 — Competitor Research

Identify competing products and compare their features, prices, and messages.

Project / application: Prepare a simple competitor comparison table.

Day 6 — Marketing Mix

Learn the basic 4Ps: Product, Price, Place, and Promotion.

Project / application: Create a 4P plan for a sample product.

Day 7 — Branding & Positioning

Understand brand names, logos, messages, and how a business wants customers to remember it.

Project / application: Create a simple brand message for a product.

Day 8 — Marketing Communication

Practise writing clear product descriptions and promotional messages.

Project / application: Write a short product promotion.

Day 9 — Marketing Plan

Combine customer research, competitor information, and promotional ideas into a simple plan.

Project / application: Prepare a one-week marketing activity plan.

Day 10 — Marketing Project Presentation

Present the product, target customers, marketing message, and proposed activities.

Project / application: Present a simple marketing plan for a product or service.

Tools covered: Google Forms, spreadsheets, presentation software, internet research

Finance & Accounting

10-Day Course Outline | 30 Hours

Course overview: Learn basic accounting and financial concepts using easy examples. Practise recording transactions, preparing simple summaries, and managing a basic budget.

Day 1 — Introduction to Finance & Accounting

Understand why businesses record money received and spent. Learn the difference between finance and accounting.

Project / application: Identify income and expenses in a simple business example.

Day 2 — Basic Accounting Terms

Learn assets, liabilities, income, expenses, debit, and credit using simple examples.

Project / application: Classify sample items under the correct accounting terms.

Day 3 — Recording Transactions

Understand how daily business transactions are recorded and why receipts are important.

Project / application: Prepare a simple daily transaction record.

Day 4 — Cash Book & Expense Tracking

Learn how to record cash received and payments made. Calculate the remaining balance.

Project / application: Create a basic cash book in a spreadsheet.

Day 5 — Invoices & Bills

Understand the purpose of invoices, bills, receipts, and payment records.

Project / application: Prepare a sample sales invoice.

Day 6 — Introduction to Financial Statements

Learn what a profit and loss statement and balance sheet show at a basic level.

Project / application: Prepare a simple income and expense summary.

Day 7 — Budgeting

Understand how to plan expected income and expenses and compare them with actual spending.

Project / application: Create a monthly budget for a small business.

Day 8 — Spreadsheet Skills for Finance

Use simple spreadsheet formulas such as SUM, subtraction, and percentage calculations.

Project / application: Prepare an expense summary using formulas.

Day 9 — Tax & Financial Awareness

Learn the basic purpose of taxes and GST in India. Understand that actual tax filing needs qualified guidance.

Project / application: Identify GST details on a sample invoice.

Day 10 — Finance Mini Project & Review

Combine transaction records, invoices, and a budget into a simple financial file.

Project / application: Present a basic monthly finance report.

Tools covered: Microsoft Excel or Google Sheets, calculator, sample invoices and receipts

Digital Marketing

10-Day Course Outline | 30 Hours

Course overview: Learn how businesses promote products and services online. Practise creating content, understanding social media, and exploring basic SEO and campaign results.

Day 1 — Introduction to Digital Marketing

Understand online marketing and how businesses use websites, search engines, and social media.

Project / application: Identify the digital channels used by a familiar brand.

Day 2 — Content Planning

Learn how to choose topics and prepare useful content for a target audience.

Project / application: Create a simple one-week content calendar.

Day 3 — Social Media Basics

Explore common social media platforms and understand how businesses use posts, stories, and short videos.

Project / application: Prepare three post ideas for a sample business.

Day 4 — Creative Content Writing

Practise writing simple captions, headlines, and calls to action.

Project / application: Write captions for three promotional posts.

Day 5 — Basic Graphic Design

Learn simple design rules for readable social media posts, including colour, font, and layout.

Project / application: Create a basic promotional social media post.

Day 6 — Introduction to SEO

Understand how search engines find webpages. Learn keywords, page titles, and simple content improvements.

Project / application: Choose keywords and write a page title for a sample business.

Day 7 — Email & Online Promotion

Understand the purpose of promotional emails and how to write a clear message.

Project / application: Draft a simple promotional email.

Day 8 — Introduction to Paid Ads

Learn the basic purpose of online ads, audiences, budgets, and campaign goals. Explore ad examples without launching paid campaigns.

Project / application: Prepare a sample advertisement plan.

Day 9 — Campaign Tracking

Understand basic measures such as reach, clicks, likes, and enquiries. Read a sample campaign report.

Project / application: Prepare a simple campaign performance summary.

Day 10 — Digital Marketing Mini Project

Combine content ideas, social media posts, keywords, and campaign goals into a small plan.

Project / application: Present a one-week digital marketing campaign.

Tools covered: Canva, social media platforms, Google Trends, Google Search, spreadsheets

Business Development

10-Day Course Outline | 30 Hours

Course overview: Understand how businesses find new opportunities, connect with potential clients, maintain relationships, and plan activities that support business growth.

Day 1 — Introduction to Business Development

Understand how business development supports company growth through new customers and partnerships.

Project / application: List possible growth opportunities for a sample business.

Day 2 — Understanding Products & Services

Learn how to explain what a company offers and what problems it solves for customers.

Project / application: Prepare a short company and service introduction.

Day 3 — Market Research

Learn how to identify target industries, customer groups, and possible business opportunities.

Project / application: Prepare a list of potential customer groups.

Day 4 — Finding Potential Clients

Understand basic lead generation through directories, websites, events, and referrals. Use public business information responsibly.

Project / application: Create a sample list of potential clients.

Day 5 — Professional Communication

Practise introductions, business emails, and polite follow-up messages.

Project / application: Write an introductory email to a potential client.

Day 6 — Client Needs & Presentations

Learn to ask questions, understand client requirements, and explain a suitable service.

Project / application: Prepare a short service presentation.

Day 7 — Negotiation Basics

Understand how to discuss requirements, timelines, and expectations professionally.

Project / application: Practise a simple client discussion using a role-play.

Day 8 — Follow-up & Relationship Management

Learn how to record conversations, plan follow-ups, and maintain professional client relationships.

Project / application: Create a basic client follow-up tracker.

Day 9 — Business Proposal Basics

Understand the sections of a simple proposal, including client need, suggested service, timeline, and cost estimate.

Project / application: Prepare a sample one-page business proposal.

Day 10 — Business Development Mini Project

Combine research, lead generation, communication, and proposal preparation.

Project / application: Present a simple business development plan.

Tools covered: Spreadsheets, email, presentation software, public business directories

Sales

10-Day Course Outline | 30 Hours

Course overview: Learn the basic sales process, how to understand customer needs, explain products clearly, respond to questions, and maintain simple sales records.

Day 1 — Introduction to Sales

Understand the role of sales in a business and learn the steps from first contact to completed sale.

Project / application: Map the steps involved in selling a familiar product.

Day 2 — Product & Service Knowledge

Learn how to understand product features, benefits, price, and common customer questions.

Project / application: Prepare a simple product information sheet.

Day 3 — Understanding Customer Needs

Practise listening and asking clear questions to understand what a customer needs.

Project / application: Create five questions to understand a customer's requirements.

Day 4 — Finding & Contacting Leads

Understand basic ways to find potential customers and make a polite first contact.

Project / application: Prepare a sample lead list and introduction message.

Day 5 — Sales Communication

Practise explaining a product in simple language and speaking politely with customers.

Project / application: Deliver a short product introduction.

Day 6 — Handling Customer Questions

Learn how to respond to common questions and concerns honestly and clearly.

Project / application: Prepare answers to five common customer questions.

Day 7 — Sales Demonstration

Understand how to show a product or explain a service step by step.

Project / application: Prepare a short product demonstration.

Day 8 — Negotiation & Closing Basics

Learn how to discuss price and terms respectfully and explain the next step in a sale.

Project / application: Practise a simple sales conversation through role-play.

Day 9 — Sales Records & Follow-up

Record customer details, enquiries, and follow-up dates. Understand basic sales targets.

Project / application: Create a simple sales tracker in a spreadsheet.

Day 10 — Sales Mini Project & Review

Combine product knowledge, customer communication, demonstration, and follow-up into a practice sales activity.

Project / application: Present a mock sales pitch and completed sales tracker.

Tools covered: Spreadsheets, email, presentation software, sample product catalogue or brochure
